### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ms. Shannon Schemel on 22 December 2008.

The application has been amended as follows:

Claim 1. (Currently Amended): A powered clamping chuck for machine tools having a chuck body (1) and several clamping jaws (4) that are arranged movably in radial jaw guides (3) of the chuck body (1) and are displaceable together, by means of a drive, radially with respect to a chuck axis (A), the drive including key bars (5) that are slidably guided transversely to the chuck axis (A) for displacement of the clamping jaws (4) in the chuck body (1) and each comprise a tooth set (7) that is in engagement with a corresponding counter-tooth set (8) on an associated clamping jaw (4); a positioning mechanism being provided that comprises a releasing bolt (P) mounted rotatably in the chuck body (1) and a releasing key (S) that can be coupled to the releasing bolt (P) in order to displace, by way of a rotation of the releasing bolt (P), the key bar (5) or a coupling attachment (5b), comprising the tooth set (7), of the key bar (5) parallel to the chuck axis (A) between an upper working position and a lower jaw changing position in

which the tooth set (7) of the key bar (5) is pulled back out of the counter-tooth set (8) of the clamping jaw (4) and the latter can be removed radially from the chuck body; and a locking device being provided which locks the releasing key (S) on the releasing bolt (P) and permits disengagement of the releasing key (S) only in the working position of the key bar (5), wherein the key bar (5) has locking means that allow a rotation of the releasing bolt (P) out of the rotational position corresponding to the lower jaw changing position of the key bar (5), into the rotational position corresponding to the upper working position of the key bar (5), if the tooth set (7) of the coupling attachment (5b) is in engagement with the counter-tooth set (8) of an associated clamping jaw (4), and that otherwise prevent rotation of the releasing bolt (P) into the rotational position corresponding to the upper working position, wherein the coupling attachment (5b) possesses on its underside a guide extension (11) that engages into a corresponding guide bore (17) of the key bar body, and wherein the coupling attachment (5b) is braced against the key bar body (5a) by way of compression springs (15), optionally via pusher pieces (16), and is pushed toward the clamping jaw (4).

Claim 5. (Canceled)

Claim 6. (Canceled)

Claim 7. (Currently Amended): A key bar having a key bar body (5a) and, held thereon, a coupling attachment (5b) on whose upper side a tooth set (7) is provided, an eccentric

bolt (12) being rotatably mounted in a transverse bore (13) of the key bar body (5a) and carrying a radially projecting extension (14) that, upon a rotation of the eccentric bolt (12), comes into engagement with a corresponding countersurface (19) of the coupling attachment (5b) in order to displace the latter between an upper working position and an lower jaw changing position, wherein the key bar (5) has locking means that allow a rotation of a releasing bolt (P) out of the rotational position corresponding to the lower jaw changing position of the key bar (5), into the rotational position corresponding to the upper working position of the key bar (5), if the tooth set (7) of the coupling attachment (5b) is in engagement with the counter-tooth set (8) of an associated clamping jaw (4), and that otherwise prevent rotation of the releasing bolt (P) into the rotational position corresponding to the upper working position, wherein the coupling attachment (5b) possesses on its underside a guide extension (11) that engages into a corresponding guide bore (17) of the key bar body (5a), and wherein the coupling attachment (5b) is braced against the key bar body (5a) by way of compression springs (15), optionally via pusher pieces (16), and is pushed toward the clamping jaw (4).

Claim 10. (Canceled)

Claim 11. (Canceled)

***Response to Arguments***

2. Applicant's arguments, see pages 16-17, filed 12 August 2008, with respect to the 35 U.S.C. 102 rejection of claims 1 and 7 have been fully considered and are persuasive. The rejection of claims 1 and 7 has been withdrawn.
3. A rejection under 35 U.S.C. 102 of claim 7 and 10 as being anticipated by Schunk (DE 296 15 682 U), and a rejection under 35 U.S.C. 103(a) of claims 1, 2, and 5 as being obvious over Schunk (DE 296 15 682 U) and Bronzino et al. (U.S. Patent 5,630,594) as identified in the International Search Report of PCT/EP03/14651 would apply, but this rejection has been overcome by the Examiner Amendment above.

***Allowable Subject Matter***

4. Claims 1-4 and 7-9 are allowed. Claims 1, 3, 4, 7, 8, and 9 are the independent claims.

5. The following is an examiner's statement of reasons for allowance:

The closest prior art of record is U.S. Patent 4,969,654 to Theodolin, which was applied to the claims in the office action mailed 15 April 2008. Suffice it to say, the patent to Theodolin at least does not disclose "locking means that allow a rotation of the releasing bolt (P) out of the rotational position corresponding to the lower jaw changing position of the key bar (5), into the rotational position corresponding to the upper working position of the key bar (5), if the tooth set (7) of the coupling attachment (5b) is in engagement with the counter-tooth set (8) of an associated clamping jaw (4), and that otherwise prevent rotation of the releasing bolt (P) into the rotational position

corresponding to the upper working position" as claimed in independent claims 1, 3, 4, 7, 8, and 9, and as such does not anticipate the instant invention as disclosed in independent claims 1, 3, 4, 7, 8, and 9.

Furthermore, there is no combinable teaching in the prior art of record that would reasonably motivate one having ordinary skill in the art to so modify the teachings of Theodolin, and thus, for at least the foregoing reasoning, the prior art of record does not render obvious the present invention as set forth in independent claims 1, 3, 4, 7, 8, and 9.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ERIC A. GATES whose telephone number is (571)272-5498. The examiner can normally be reached on Mon-Thurs 8:45 - 6:15.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bryant can be reached on (571) 272-4526. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
